

Cleaning & Maintenance for Kitchen Worktops

Normal Maintenance

Due to its practically zero porosity, ultra-compact surfaces are highly resistant to staining in day-to-day use making it ideal for use as a kitchen worktop and as a surface for other kinds of work, both inside and out.

If there is a stain, we recommend the use of **THE PINK STUFF** Cream Cleaner or Cleaning Paste.

1. Apply cream on to a damp soft cloth or sponge
2. Wipe over and rinse with clean water
3. Buff with a clean microfibre cloth

Cleaning Stubborn Stains

In the case of stubborn stains, after applying The Pink Stuff, try using a **nail brush** and if that fails gently increase pressure with a **non-scratch Scourer**. Try and test on an inconspicuous area of the surface to be cleaned before use.

Prevention of knocks and marking

Although Ultra Compact surfaces are extremely resistant, knocks should be avoided in areas which are more exposed, such as corners, edges and bevels etc.

Avoid the use of metal sponges or abrasive particles and avoid direct cutting on the surface with a ceramic knife, as they are a material with similar hardness to the worktop.

All worktops need careful care and maintenance to keep them in good order.

It also depends on the colour and surface finish as to how much time you spend cleaning your worktops.

'Polished' worktops are easier to clean than 'Natural' Finishes as any spillages wipe away more easily.

The best recommendation is to clean up any spillages at the time and not let them sit on the worktop for any amount of time.

If you are using a household cleaner or our recommended brand then always rinse and dry with a clean tea towel.
